WORLD ENVIRONMENT DAY (June 5, 2022)

World Environment Day (WED) is celebrated on June 5 every year. This day is led by the United Nations Environment Programme since 1974 after Stockholm Conference and celebrated annually worldwide. World Environment Day is a vital global platform for encouraging worldwide awareness & action for the protection of environment. ***The theme for this year's "Only One Earth" with the focus on "Living Sustainably in Harmony with Nature".***

Time is running out and nature is in emergency state. To keep Global Warming below 1.5°C this century, we must reduce annual greenhouse gas emissions to half by 2030. Without action, exposure to air pollution beyond safe guidelines will increase by 50 per cent within the decade and plastic waste flowing into aquatic ecosystems will nearly triple by 2040.

Transformative changes can be brought through policies, cleaner and greener lifestyle with a sustainable living in harmony with nature. Global challenge and key responsibility of mankind is to protect our only planet, which is our home for eternity. Earth's finite resources must be safeguarded by improving our relationship with nature, understanding its value and putting that value in the heart of decision making. Nature's gifts i.e. Air, Water, Soil & Trees are often hard to value in monetary terms so we must scale up our action to protect these nature's gifts. We have the knowledge, solutions and technology to limit climate change and retrieve ecological collapse.

DFCCIL has adopted many sustainable practices for collective, transformative action on mega scale while carrying out construction activity to protect our planet and its benevolence. Many landmark initiatives for protection of environment are being continually evolved to do better for protection of nature.

On the occasion of WED, let us pledge to take responsive steps from harming to healing "*The Planet Earth*" and scale up green deeds so that unique and beautiful planet remains a comfortable home for humanity."

"In the universe, are billions of galaxies, In our galaxy are billions of planets, But there is "Only One Earth". Let's take care of it".
