1.3.17 Selection of Consultant by on Quality cum Cost-Based Selection (QCBS) system

1.3.17.1 The selection of consultant will be done on Quality cum Cost-Based Selection (QCBS) system (QCBS system of evaluation is based on the cost committed by the bidder and the Qualification, experience of key experts and Past experience of the bidder) provided the consultant qualify ;

- (a) Threshold Financial Capacity (as per clause No. 1.3.17.2), and
- (b) Score minimum 60% score in Qualification and Past experience as per criteria laid down in clause 1.3.17.4, and
- (c) Bidders bid is found responsive (as per clause No. 1.3.10.17/i). QCBS system of evaluation is based on the cost committed by the bidder and the Qualification and Past experience of the bidder.

The work will be awarded to bidder who scores highest combined score as per QCBS system of Bid evaluation. Combined score will be calculated on the basis of Qualification and Past experience of the bidders and Quoted Financial bid of

bidders.

1.3.17.2 Threshold Financial Capacity:- The tenderer (bidder or JV firm as a whole) must have minimum average annual contractual turnover of V/N or V whichever is less.

V= Advertised value of the tender in crores of Rupees, N= Number of years prescribed for completion of work for which bids have been invited.

The average annual contractual turnover shall be calculated as an average of “total contractual payments” in the previous three financial years, as per the audited balance sheet. However, in case balance sheet of the previous year is yet to be prepared/ audited, the audited balance sheet of the fourth previous year shall be considered for calculating average annual contractual turnover. The tenderers shall submit requisite information as per **Form No. T-8E**, along with copies of Audited Balance Sheets duly certified by the Chartered Accountant/ Certificate from Chartered Accountant duly supported by Audited Balance Sheet.

1.3.17.3 Methodology for calculation of Combined score (S) of bidders:

Under QCBS selection, the technical proposals will be allotted weightage of 70% (Seventy per cent) while the financial proposals will be allotted weightages of 30% (Thirty per cent). Proposal with the lowest cost may be given a financial score of 100 (Hundred) and other proposals given financial scores that are inversely proportional to their prices w.r.t. the lowest offer. Similarly, proposal with the highest technical marks (as allotted by the evaluation committee) shall be given a score of 100 (Hundred) and other proposals be given technical score that are proportional to their marks w.r.t. the highest technical marks. The total score, both technical and financial, shall be obtained by weighing the quality and cost scores and adding them up. On the basis of the combined weighted score for quality and cost, the consultant shall be ranked in terms of the total score obtained. The proposal obtaining the highest total combined score in evaluation of quality and cost will be ranked as H-1 followed by the proposals securing lesser marks as H-2, H-3 etc. The proposal securing the highest combined marks and ranked H-1 will be invited for negotiations, if required and shall be recommended for award of contract. In the event two or more bids have the same score in final ranking, the bid with highest technical score will be H-1 In such a case, an Evaluated Bid Score (B) will be calculated for each responsive Bid using the following formula, which permits a comprehensive assessment of the Bid price and the technical merits of each Bid. The Bid with the best evaluated Bid Score (B) among responsive Bids shall be the Most Advantageous Bid and consultancy work shall be awarded to that bidder subjected to other term and conditions of this RFP.

Signature of tenderer (s)

Page 24 of 154

$$B = \frac{C_{\text{low}} \times P}{C} + \frac{T \times X \times (1 - P)}{T_{\text{high}}}$$

C = Evaluated Bid Price

C_{low} = the lowest of all Evaluated Bid Prices among responsive Bids

T = the total Technical Score awarded to the Bid

T_{high} = the Technical Score achieved by the Bid that was scored best among all responsive Bids

P = weightage for the Price as specified in the BDS

The Bid with the best evaluated Bid Score (B) among responsive Bids shall be the Most Advantageous Bid.

As an example, the following procedure has to be followed. In a particular case of selection of consultant, it was decided to have minimum qualifying marks for technical qualifications as 60 (Sixty) and the weightage of the technical bids and financial bids was kept as 70 (seventy) : 30 (Thirty). In response to the RFP, three proposals, A, B & C were received. The technical evaluation committee awarded the following marks as under:

A: 75 Marks

B: 80 Marks

C: 90 Marks

The minimum qualifying marks were 60 (Sixty) thus, all the three proposals were found technically suitable. Using the formula T/T_{high}, the following technical points are awarded by the evaluation committee:

A: 75/90 = 83 points

B: 80/90 = 89 points

C: 90/90 = 100 points

The financial proposals of each qualified consultant were opened after notifying the date and time of bid opening to the successful participants. The price evaluation committee examined the financial proposals and evaluated the quoted prices as under:

A: Rs.120.

B. Rs.100.

C: Rs.110.

Using the formula C_{low}/C, the committee gave them the following points for financial proposals:

A: $100/120 = 83$ points
 B: $100/100 = 100$ points
 C: $100/110 = 91$ points

In the combined evaluation, thereafter, the evaluation committee calculated the combined technical and financial score as under:

Proposal A: $83 \times 0.30 + 83 \times 0.70 = 83$ points.
 Proposal B: $100 \times 0.30 + 89 \times 0.70 = 92.3$ points
 Proposal C: $91 \times 0.30 + 100 \times 0.70 = 97.3$ points.

The three proposals in the combined technical and financial evaluation were ranked as under:

Proposal A: 83 points: H-3
 Proposal B: 92.3 points: H-2
 Proposal C: 97.3 points: H-1

Proposal C at the evaluated cost of Rs.110 (Rupees One hundred and ten) is, therefore, declared as winner and recommended for negotiations/approval, to the competent authority.

1.3.17.4 Methodology for calculation of Technical score for Qualification and Past experience of the consultant :

Technical Specifications

for

Comprehensive Study on suitability of 60 Kg, 90 UTS Rails on EDFC and 60 E1 1080 HH rails on WDFC for 25 T Axle load operation at 100 kmph on DFCCIL Routes

Scope of work (Terms of References)

The scope of this contract is to conduct detailed studies (theoretical & field experimental/trials) to ascertain suitability of 60 Kg, 90 UTS Rails on EDFC and 60 E1 1080 HH rails on WDFC for 25 T Axle load operation at 100 kmph on DFCCIL routes. The aspects to be covered in the study are given here under:

Item-1: Conducting theoretical studies required for finalizing criteria to be followed for selection of rail for operation of 25 T Axle load at 100 kmph on DFCCIL routes, which should include the following considerations:

- 1.1 Theoretical rail stress calculations based on yield/allowable stress criteria, for
 - a) Estimation of bending stress in rail due to wheel loading at critical locations of rail cross section, using Indian Railway method and comparable calculations based on international practices of any one advance Railway System.
 - b) Estimation of total stress in the rail, which includes bending stress due to wheel loading duly accounting affect due to Gradient in the track, due to Braking forces on rising and falling gradient, thermal stress, residual stress, stress in rail for unforeseen factors & any other stress especially due to curvature etc. using Indian Railway method (RDSO) and comparable calculations based on international practices of any one advance Railway System.
 - c) Estimation of various parameters required in rail stress calculations e.g. value of track modulus, Dynamic augment etc. for various speeds for freight stock for DFC conditions based on international practices of any one advance Railway System.
- 1.2 Fatigue analysis of rail due to bending loads in absence of any defects based on international practices of any one advance railway system.
- 1.3 Contact stress considerations (allowable shear stress, Yield and shake down limit) using Indian Railway method wherever available and based on international practices of any one advance Railway System.
- 1.4 Wear and hardness requirement of Rail for 25 T Axle load operation at 100 kmph, as prescribed by at least two advance Railway Systems.
- 1.5 Effect of small wheel diameter on strength requirement of rail (1000 mm wheel diameter vis-à-vis 840 mm new wheel diameter).

The above theoretical rail stress studies (para 1.1 to 1.5 above) should facilitate to decide:

- a) Minimum technical requirements for 60 kg rail section, in terms of steel grade (UTS), proof stress, maximum value of permitted residual stress etc for 25 T Axle load operation at 100 Kmph on DFCCIL routes.
- b) To ascertain suitability of existing 60 Kg - 90 UTS rail used in EDFC track and 60 E1 1080 HH rail used in WDFC for 25 T axle load operation at 100 Kmph on DFCCIL routes.

The report on the above studies should cover detailed analysis and design calculations duly examined and certified by the technical expert having similar experience of conducting studies on advance railway system and who has published Technical Books/Reports/papers on international journals on the subject of rail stresses or rail related issues.

Item-2: Carrying out field instrumentation, conducting test & trials on DFCCIL track to estimate by field measurements, the following parameters:

- 2.1 Measurement of following track parameters required in rail stress calculations. Each reading of measurements shall be done by 2 separate sets of equipment's/electronic gadgets for reliability of observations:
 - a) Value of track modulus (initial & elastic track modulus) for 3 track foundation conditions namely:
 - i) Track having good formation with 300/350 mm clean ballast cushion.
 - ii) Track having bad formation with 300/350mm clean ballast cushion.
 - iii) Track laid on rocky strata with 250/350 mm ballast cushion.
 - b) Value of Dynamic augment on DFCCIL routes, for following conditions:
 - i) No. of rolling stock: Five Rolling Stock, type to be decided by DFCCIL.
 - ii) Speeds: At two different speeds (75 Kmph and 100 Kmph or the maximum speed at which Rolling stock is fit).

Note: For measurement of dynamic augment, the compiled result for each stock should be based on measurements taken for at least 7 days (to have minimum 30000 data per speed per rolling stock with known static wheel load on straight and curve track) in case of trials based on rail instrumentation or based on sufficient large

data (minimum 150 Km length data) to carry out statistical analysis in case instrumented wheel or any other internationally accepted method is adopted.

- 2.2 Field measurement of actual rail Stress on critical points of rail section (rail foot Centre, rail foot corner (GF & NG), Rail head (GF, NG) under no train-load condition i.e. mainly due to residual & thermal stress in rail, to be measured @ two different rail temperatures, at three locations i.e. two in central portion of CWR/LWR & one in breathing length for each rail temperature condition of both rails in straight and 2.5 - 3.0 Degree curve track location for all 3 type of track formation conditions.
- 2.3 Field measurement of actual rail stress on critical points of rail section (rail foot Centre, rail foot corner (GF & NG), Rail head (GF[if feasible], NG) for Five rolling stocks (type to be decided by DFCCIL) and for each rolling stock two different speeds (75 Kmph and 100 Kmph or the maximum speed at which Rolling stock is fit) of both rails in straight and 2.5 - 3.0 Degree curve track location for all 3 type of track formation conditions.
- 2.4 Measurements of Stress free temperature of LWR track by adopting non-destructive technique, be measured at two different rail temperatures, at three locations i.e. two in central portion of LWR & one in breathing length of both rails in straight and sharpest curve track of all three type of track formation conditions.

Note: The actual measured rail stresses (Para-2.3 above) to be compared with theoretical calculations based on Indian railway and based on international practices of any one advance Railway System. 10 (ten) such calculations involving all 5(five) rolling stock at two different trial speed for three types of rails (JINDAL, SAIL, NSSMC, Japan) to be compiled & submitted in detailed report.
